Since 1964

FINNBÄR Oy, owned by the Oikari family from Finland, has produced high-quality Log Homes using the latest technology, since 1964. FINNBÄR has a loyal, competent workforce, who together with their partnership-network, work together throughout the world as one big family with the aim of realising the fulfilment of our customers' dreams. A Finnbar log house is a dream that can become a reality.

FINNBÄR The healthy choice for your family

Log houses in Finland have become widely recognised for centuries as the most ecological and healthy way of living and people from outside of Finland are also now becoming more aware of these advantages.

A FINNBÄR log house is the perfect home for people with allergies and those who want to live in a clean and dust free environment. The wood we use is Nordic pine (pinus sylvestris) from the forests of Finland. We use Plusforest, which produces more than is cut, and the timber is harvested according to a strictly controlled regime. Although more than 80% of Finnish houses are constructed of wood and there is a rapidly increasing export market, the forests are so well managed that they are actually increasing, making the wood a truly sustainable product. From these same forests one can pick berries and mushrooms and bears also still roam the freedom of our forests.

FINNBÄR houses meet all our customer's demands

Production is carried out using the latest technology for all processes with all procedures in the factory being completely computerised to ensure the maintenance of the highest standards of quality and to minimise errors.

We can provide square or round log wall profiles.

FINNBÄR-MASSIVE, a log cut from a single piece of solid timber, for customers who most appreciate the beauty and natural quality of the wood.

FINNBÄR-LAMINATED, a log glued from 2 or more pieces giving the best result for the most demanding of customers. The log does not crack and the settling down is minimal.

FINNBÄR windows and doors meet the highest European standards and perfectly complement the atmosphere of the house. Floor coverings and other decorative materials can be supplied according to the individual requirements of each customer. Fireplaces, saunas and all other requirements can also be included in the delivery.

FINNBÄR, leader in wood architecture

Every house is made to conform to customers' wishes. We have house plans on the Internet and a few also in this catalogue, to give you an idea of the design possibilities. If a suitable plan for you cannot be found from our designs, we can plan a house to your personal specifications and needs.

We offer to our customers a service you do not want to miss - a 3D-modelling service that allows customers to see their house as a visual image from both outside and inside before making a purchase decision. You can even choose your own colours for the house. This service is free!

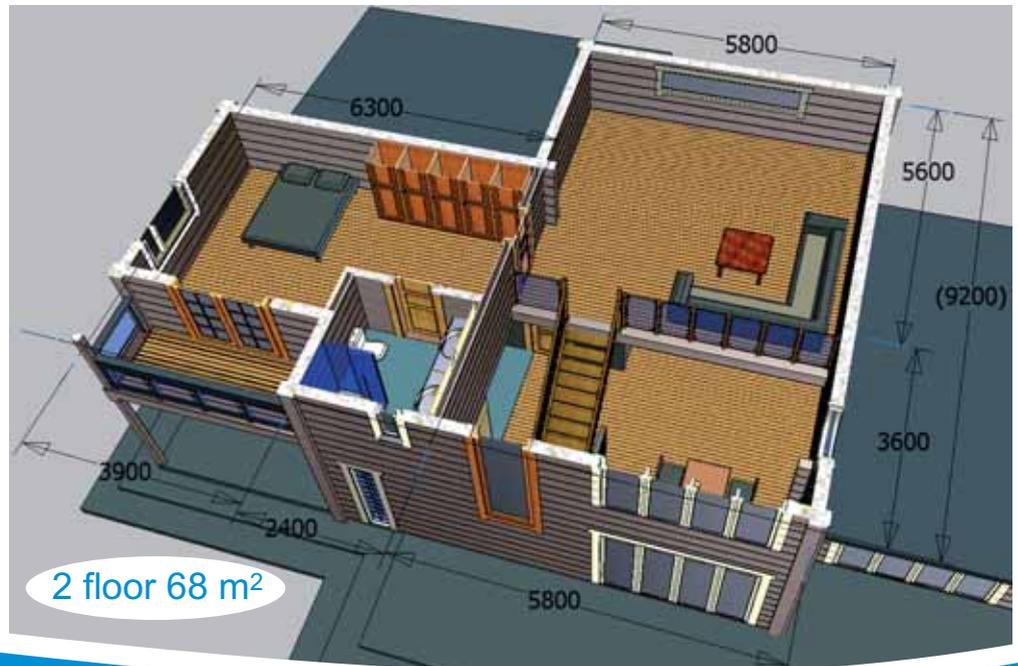

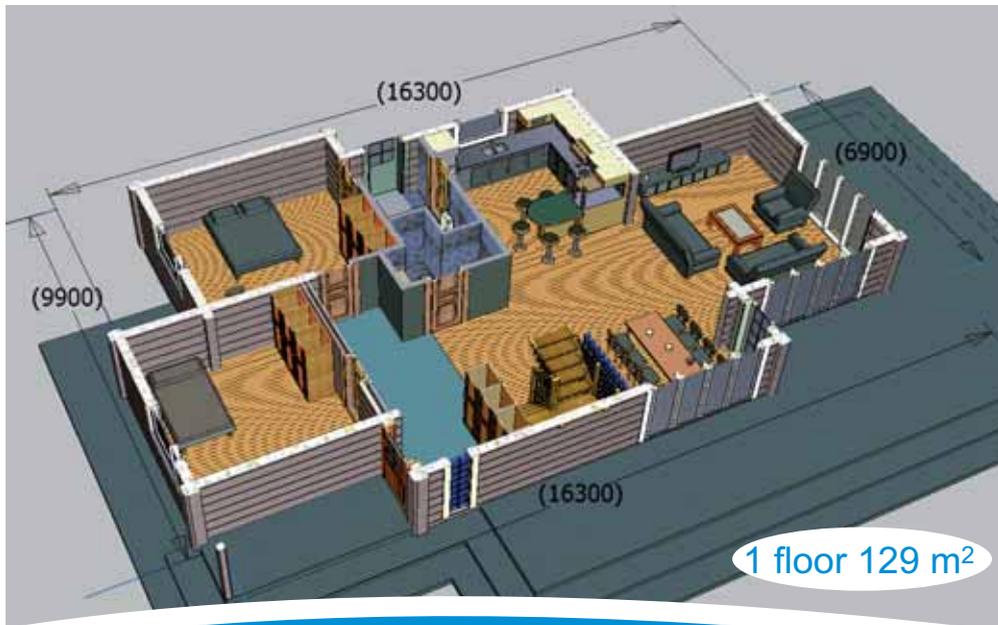

Construction Services

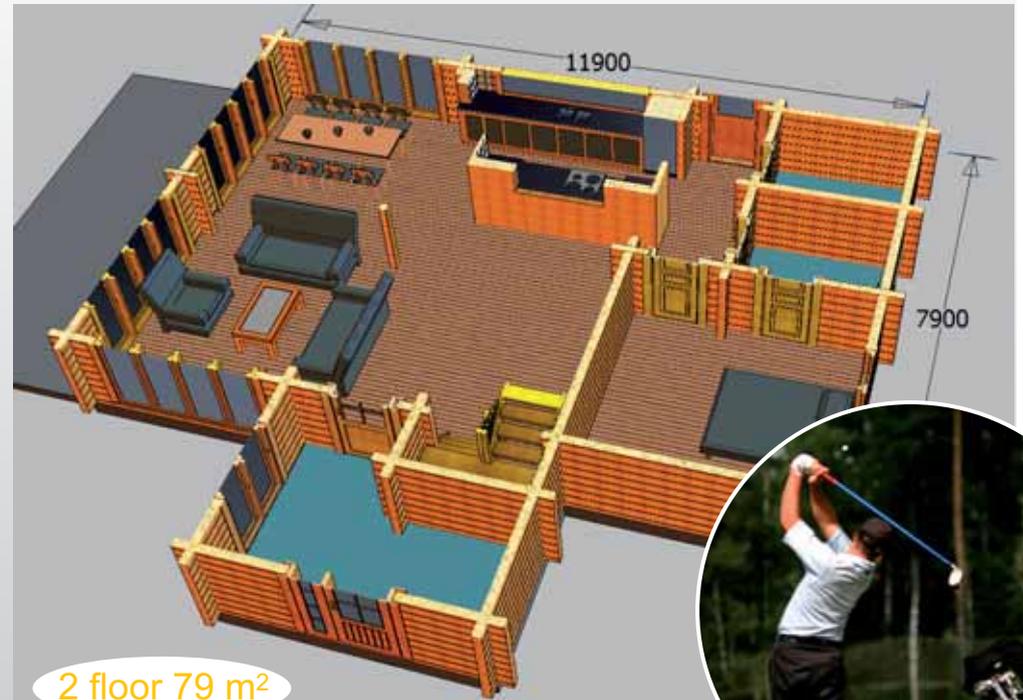

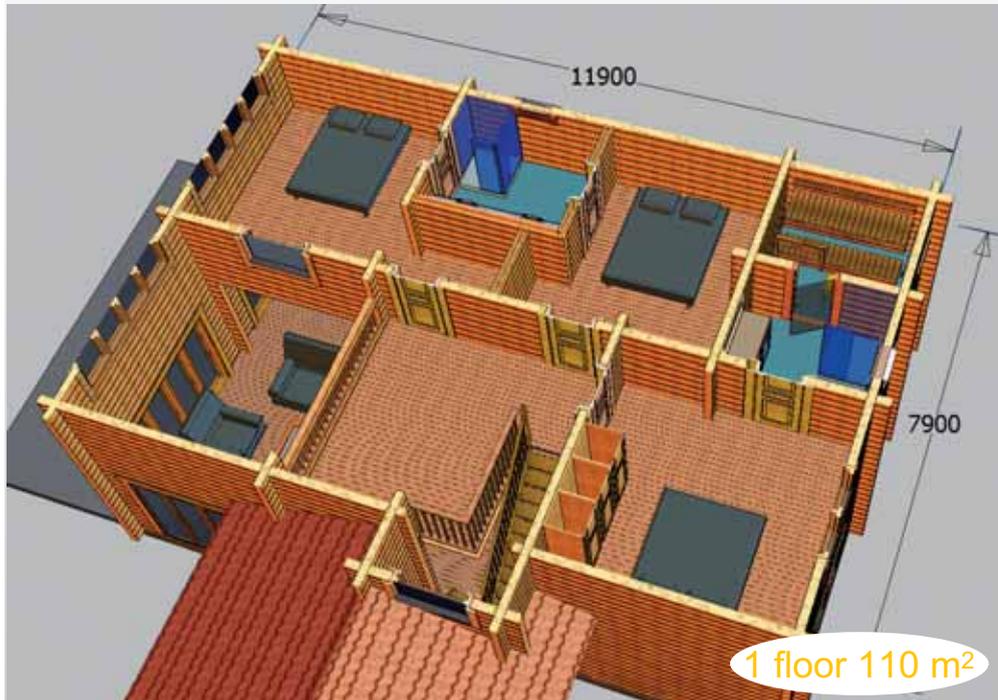

We can deliver our customers just the materials of a house or include also the construction service. One popular possibility for owner builders is to have a FINNBÄR specialist to guide you through the building process and work along side with your own construction people. The best craftsmen are at your service.
